What is claimed is:

- 1 1. A portable telephone apparatus for roaming between
- 2 a first portable telephone system and a second portable
- 3 telephone system, comprising:
- 4 reception means for receiving a message transmitted
- 5 from a base station in one of the two systems;
- 6 judging means for judging whether a received message
- 7 has a common format in the two systems or a different format
- 8 in the two systems;
- 9 first processing means for processing the received
- 10 message by performing a procedure common to the two systems
- 11 when the message has the common format, and
- 12 second processing means for processing the received
- 14 13 message by performing procedures, each procedure unique
 - 14 to each of the two systems, when the message has the
 - 15 different format.
 - 1 2. A portable telephone apparatus according to Claim 1,
 - 2 the portable telephone apparatus further comprising:
 - 3 protocol revision receiving means for receiving,
 - 4 from the base station, a protocol revision message showing
 - 5 a type of communication protocol used in one of the two
 - 6 systems;

wherein the reception means receives a succeeding
message which succeeds the protocol revision message, from
the base station;

116 1116 the second processing means processes the succeeding message by performing a procedure unique to the first system when the communication protocol in the first system is shown in the protocol revision message, and processes the following message by performing a procedure unique to the second system when the communication protocol in the second system is shown in the protocol revision message.

- 3. A portable telephone apparatus according to Claim 2, wherein a base station in the first system transmits the protocol revision message on a first frequency, and a base station in the second system transmits the protocol revision message on a second frequency,
- wherein the protocol receiving means receives either
 of the two protocol revision messages by scanning the first
 frequency and the second frequency.
- A portable telephone apparatus according to Claim 1,
 wherein the first system is an IS-95 Code Division
- 3 Multiple Access (CDMA) mobile telephone system, the second
- 4 system is an ARIB STD-T53 CDMA mobile telephone system,

systems;

5 and

6 the message having a different format is one of a) 7 a neighbor list message showing a list of a plurality of 8 base stations located close to the portable telephone apparatus, b) a channel assignment message notifying 9 10 channel allocation, c) a message including a service option request order for deciding a communication mode, d) a 11 handoff direction message for handoff processing, and e) 12 a message for performing ringer control.

- A portable telephone apparatus according to Claim 4, the portable telephone apparatus further comprising: protocol revision receiving means for receiving, from the base station, a protocol revision message showing a type of communication protocol used in one of the two
- 6 wherein the reception means receives a succeeding message which succeeds the protocol revision message, from 7 the base station:
- 9 the second processing means processes the succeeding 10 message by performing a procedure unique to the first 11 system when the communication protocol in the first system 12 is shown in the protocol revision message, and processes 13 the following message by performing a procedure unique to

- 14 the second system when the communication protocol in the
 - 15 second system is shown in the protocol revision message.
